About TFRI

Our Organizational Structure

The Terry Fox Research Institute is a collaboration between partner cancer research institutes, health centres and academic institutions across Canada. TFRI is organized into geographically dispersed yet functionally integrated research nodes. Partner institutions within each provincial node provide laboratory space for TFRI scientists and arrange for cancer patient participation in research studies. A node leader in each region provides leadership and direction, bringing together local scientists and research teams to work on specific projects.

The TFRI headquarters team in Vancouver, BC liaises between the provincial nodes and facilitates communication and coordination across all the partner institutions.

TFRI Partners

The Terry Fox Research Institute has partnered with more than 40 of the country's top cancer research hospitals, universities, cancer agencies and research institutes and connected with over 175 of the nation's finest scientists and clinicians.
